

Coffee → Shop.

Introduction

About
Us

This presentation analyses the “Bright Coffee Shop Sales” dataset to uncover key insights that support business growth and improved decision-making. The analysis focuses on identifying top-performing products, understanding peak sales periods, and evaluating sales trends over time. The objective is to provide actionable recommendations that will help the new CEO increase revenue and optimise overall product performance.

Revenue Analysis

The analysis shows that revenue is heavily concentrated in core beverage categories, particularly Coffee and Tea, which consistently outperform other products across all locations. While secondary products contribute moderately, several categories underperform, highlighting opportunities for strategic improvement and optimisation

Sales Time Trends

Sales performance is heavily skewed towards weekdays, with all store locations generating substantially higher revenue during the week. The noticeable drop in weekend sales highlights an untapped opportunity to drive growth through targeted weekend promotions and customer engagement strategies

Sales By Product Category

The analysis shows that revenue is dominated by beverage categories, with Coffee and Tea significantly outperforming all other products across every store location. Coffee emerges as the primary revenue driver, followed closely by Tea, indicating strong customer demand for core beverages. Mid-performing categories such as Bakery and Drinking Chocolate contribute moderately, while products like Flavours, Packaged Chocolate, and Branded items generate minimal revenue. The consistent pattern across all locations suggests stable customer preferences, with slight variations highlighting opportunities for targeted product strategies.

Sales Trend By Month

The increase in sales towards June can be attributed to seasonal factors, as colder weather typically drives higher demand for hot beverages such as coffee and tea. This suggests that temperature and seasonal changes have a direct impact on customer purchasing behaviour, presenting an opportunity for the business to align its strategies with seasonal demand patterns.

Recommendation: →

- Focus on promoting high-performing products (Coffee and Tea) to maximise revenue
- Introduce seasonal campaigns (especially in colder months) to capitalise on increased demand

- Implement targeted promotions during low-sales periods (e.g. weekends) to drive traffic
- Offer “Buy 1 Get 1 Free” specials to attract couples, friends, and colleagues

- Improve visibility and appeal of low-performing products through bundling and discounts
- Tailor product offerings based on store-specific performance and customer preferences

Implementation Plan

Short-term (0–3 months):

- Launch Buy 1 Get 1 Free promotions during weekends and off-peak hours
- Promote Coffee and Tea through in-store marketing and combo deals

Medium-term (3–6 months):

- Introduce seasonal campaigns aligned with colder months
- Bundle low-performing products with best-sellers to increase uptake

Long-term (6+ months):

- Monitor sales trends and customer behaviour regularly
- Adjust pricing, product mix, and promotional strategies based on data insights
- Implement dashboards for continuous performance tracking

Cozy Ambiance

- Create a warm and inviting in-store atmosphere (lighting, seating, décor)
- Introduce comfortable spaces for customers to relax, work, or socialise
- Play soft background music to enhance the coffee shop experience
- Align ambiance with colder seasons to encourage longer visits

Q&A
